

EpilaDerm
enzyme hair reduction

Beautiful
hair free skin!

The image displays the EpilaDerm product line. On the left is a white rectangular box with the brand name 'EpilaDerm' in a large, blue, sans-serif font, topped with a blue wavy line. Below the name, it reads 'Enzyme Complex & Accelerator'. To the right of the box are two white, cylindrical pump bottles. The bottle on the left is labeled '1' in a blue circle and 'Enzyme Complex' below it. The bottle on the right is labeled '2' in a blue circle and 'Accelerator' below it. Both bottles feature the 'EpilaDerm' logo and name in blue. The background is a plain, light-colored surface.

The EpilaDerm enzyme hair reduction system will improve ANY method of depilation!

EpilaDerm is a holistic system that in combination with professional depilation will result in long term hair growth reduction.

Many of the typical disadvantages of usual hair removal methods are solved by EpilaDerm, such as high pain during waxing, ingrown hairs, impure and dry or rapidly occurring stubbly skin.

No need to use a Laser or IPL when you can use EpilaDerm for long term hair growth reduction!

Long-term hair removal/hair growth reduction over time.
The results are individual and can vary from person to person.

EpilaDerm Enzyme Care for long-term hair growth reduction

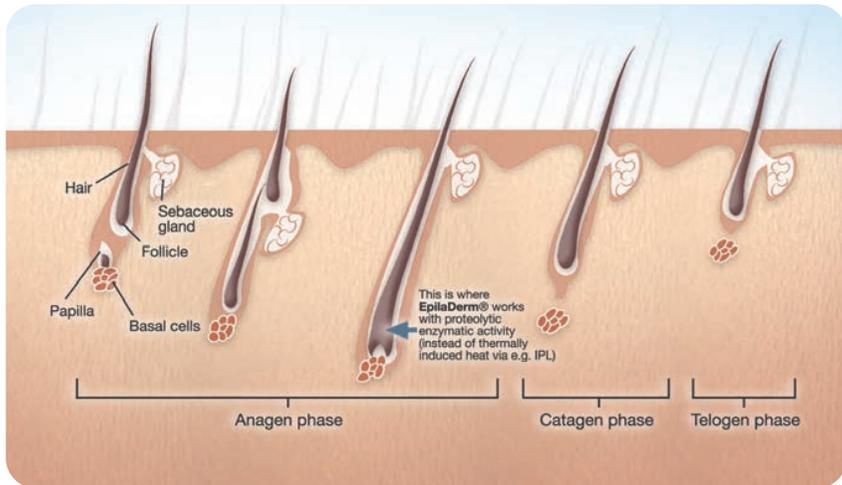

EpilaDerm Enzyme Care is a professional product applied immediately after epilation by your skin care professional.

- * Suitable for all body areas – including the intimate areas
- * Effective on all skin and hair types
- * For long lasting hair reduction
- * Suitable in summer and winter
- * Longer intervals between treatments over time

Function and benefits

1. EpilaDerm Enzyme Care reduces hair growth enzymatically (protein-splitting) so that the hairs will become thinner, lighter, softer and less in volume over time.
2. Epiladerm Enzyme Care is used for optimal post-epilative skin care: It soothes, cools and moisturizes the skin.
3. EpilaDerm Enzyme Care has an anti-inflammatory effect in order to soothe redness and prevent against skin irritations.

EpilaDerm BodyCare

Proper skin care between hair removal sessions is very important for the long-term hair growth reduction and health of the skin. It also provides increasingly less painful and more effective hair removal.

EpilaDerm BodyCare Enzyme-Peeling

EpilaDerm Enzyme-Peeling is gentle to use because neither friction nor grinding takes place at the skin surface (no micro-injuries). The gentle EpilaDerm Enzyme-Peeling not only leads to smooth and velvety skin, but also keeps the aperture of the hair follicles free of dead skin cells and can thus reduce the occurrence of ingrown hairs.

Application: The EpilaDerm BodyCare Enzyme-Peeling gel should be massaged into wet skin for 5 – 10 minutes depending on intensity desired. Remove thoroughly with water.

EpilaDerm BodyCare Inhibitor

In order to ensure hair growth reduction with EpilaDerm Enzyme Care and inhibit hair regrowth the depilated skin specifically should be maintained with the BodyCare Inhibitor at home – especially during the first week after hair removal.

Application: Apply once or twice daily during the first week after hair removal on the hair free skin. Suitable for all skin types.

Tips for optimal skin care at home:

On the day of hair removal:

- * No Solarium, sunbathing, sauna, swimming pool or hot tub
- * No creams or creamy shower gels
- * No anti-perspirant/deodorant sticks for 24 hours before hair removal
- * No make-up before facial hair removal
- * No aspirin or other painkillers
- * Wear breathable clothing
- * Bring fresh shirt (cotton) for hair removal of chest, stomach and back
- * Bring fresh underwear (cotton) for hair removal of intimate area

After hair removal :

- * Do any type of work or activity under hygienic conditions
- * No sports or sweaty activities for at least 72 hours to avoid irritation
- * No Solarium, sunbathing, sauna, swimming pool or hot tub for at least 72 hours
- * Avoid any deodorants containing alcohol

General:

DO NOT use any other method of hair removal in between the EpilaDerm applications. It can negatively affect the results of using EpilaDerm.

With EpilaDerm you will
experience your skin as soft
and hair free as never before
